MIGHTY MOUNTS NYLON BASE NON-PENETRATING ROOF TOP SUPPORTS

Mighty Mount NB-500 Nylon Base Roof Top Support is designed to support the installation of roof top materials. Including stands for ductwork, VRF condensers, air conditioning units and mini-split units. Along with supports for gas pipe, conduit, refrigeration lines and other piping needs. The Nylon Base offers one of the strongest non-penetrating roof top supports along with the half inch rubber sub-base that protects the roof membrane. The rubber sub-base also reduces the vibration caused by running equipment.

The Nylon NB-500 is molded from nylon type 6/6 with 30% glass fibers. Nylon 6/6 combined with glass fibers makes it an extremely strong base. It is highly adaptable to a variety of support configurations. The center cube can accept 1-5/8" Unistrut or 1-1/4" galvanized pipe for supporting condenser stand or ductwork.

The Rubber Sub-Base acts as a cushion between the NB-500 Nylon support and the roof membrane, protecting it from damage. The cushion can reduce the vibration noise caused by the equipment being supported. This base can support 500 pounds each.
